

## Introduction to Experience Gallery

Hello. My name is Sebu Daniel Eisaian and I'm an honors student at the University of California Irvine studying Computer Science. I'm 20 years old and I'm the creator and founder of Experience Gallery and it's crypto token known as EGT. You can find it on the Harmony Blockchain Explorer at this link: <https://explorer.pops.one/address/0xfb94c92b67ad09abd570557f8fa2385a1d2e4790>

I decided to create my own Experience Gallery Marketplace to not only represent a different way to imagine NFT's, but also to implement my version of a cohesive economic environment. Experience Gallery is a marketplace where people can display and trade experiential NFT's. The NFT's relate to the experiences, emotions, and events people encountered over the course of their lives.

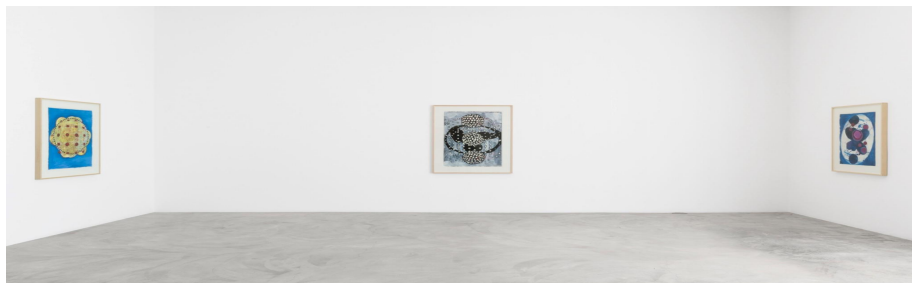

The product's initial core focus is to encourage users to create and share experiential NFT's relating to traumatic occurrences that the user has experienced in their past and they will be rewarded 100 EGT to do so to encourage trade and postings on the platform. The core vision is to tokenize human emotion.

## Solving a Problem

Social Media platforms and the user culture poorly represent the wide range of human emotion experienced throughout society. The culture of social media is to personify feelings of serenity, abundance, and enthusiasm whilst discussions of trauma and negative experiences rarely come up. When people have moments of reflection and think about the past, so often damaging memories come up. The turmoil and sadness that is experienced in the real world isn't depicted well enough. It is valuable for all societies to have a means to convey the bad, the sad, and the unfortunate. Experience Gallery is a powerful way to do so, while also tokenizing these harsh realities on the blockchain. This way intellectual property like people's perspectives and stories can be protected and stored. We want to tokenize the authentic and unique human experience.

## Integration of the Art Gallery in the Metaverse

To start the experience gallery will be displayed via web page where users can scroll through continuous pages of experiential NFT's but this is not at all the intended purpose of how we want to depict the digital art. In the future the experience gallery will host events in a space similar to what is shown below.

Keeping art exhibits in mind. The feel of walking around and freely bidding on art with EGT Token is what we envision for the depiction of experiential NFT's.

### **Problem solved by Experience Gallery**

Using NFT's and Digital Art to convey feelings and emotions.

### **Why does this need to involve blockchain technology?**

To tokenize the human perspective. To allow people to use crypto to protect their intellectual property. To allow people to purchase authentic digital art they can relate to.

### **Initial and Final Supply of EGT**

The founder of the coin Sebu Eisaian wanted to impose his non-inflationary and equitable economic beliefs on the EGT Token. He believes there should be fixed units of currency and that the efficiencies of the market place would mean that the initial supply equaling the max supply won't cause any issues. There will be exactly 100,000,000 EGT tokens created at the launch of the crypto on Harmony's Testnet and it will remain that way for the remainder of time.

### **How will the coins be distributed**

To encourage transactions on the platform and to encourage activity the owner of all tokens will distribute them 100 tokens at a time until 1000 wallets hold EGT Token.

### **Fees associated with transacting on the network**

Currently there are only minimal fees associated with the Harmony One Chain but our future plans include:

Every transaction on the blockchain will have a 0.5% fee associated with it. Meaning that a purchase of 200 EGT would require 1 additional EGT token to complete the transaction. The 0.5% of every transaction will be claimed by the Experience Gallery Treasury/Creator.

### **The Experience Gallery Treasury: The Distributor of EGT**

At the time this white paper was written all 100 million EGT was held by the creator. The experience gallery treasury is the address that first distributes the coins essentially free to all of its users.

### **What will transactions be used for?**

Transactions will be used to purchase other people's intellectual property/NFT's. Many people still are yet to reflect on unresolved traumas and experiences that still subconsciously weigh on them. If a

piece of digital art really resonates with members of a community using this blockchain and it's powerfully relatability has influence then users can feel free to bid for the art work. The owner/creator of the text and the digital art can sell that experience on the market place where the NFT will be transferred instantly over the blockchain to the buyer's gallery wallet.

## **Transparency**

Although wallet addresses will only be digits there is an option for the user to attach a name, social media accounts, etc to verify their identity. This is encouraged yet optional. Transaction wise, like any other crypto currency all transactions will be held on the blockchain ledger immutably and will be free for inspection from all users.

## **How is Experience Gallery Different from other NFT Marketplaces?**

The experience gallery is specifically designed and designated for the depictions of the human experience. Each artistic creation will have a passage/story associated with it and could have many contributors.

## **Examples of Experiential NFT's**

- Screenshots of text messages
- Photos of a party
- Videos/Gifs
- Music
- Cartoon Like Art
- Memes

## **Why wouldn't these "experiential nfts" be sold on any other NFT exchange?**

The purpose of the Experience Gallery is to efficiently store human experiential art on the blockchain. The platform only encourages the sale of emotionally resonant art created by users and described by users. Each NFT is a snapshot into someone's lived experience.

## **Chat Box**

Every NFT listed on the Experience Gallery dApp will have a chat box associated with it where users can connect to the dApp with their wallet and share their thoughts on a certain NFT. It can either be bidding for the piece or just a shared perspective on the art work and how it made them feel. The platform encourages open dialogue and a sense of community for those willing to put their artwork out there on display.

## **Examples**

1)

“When I was in middle school I had a stutter. When I approached people and attempted to make new friends I was always laughed at. I was told “no one likes you, please leave us alone” this stuck with me for many years and I didn’t take many social risks to meet people after the fact.

\*The user can then submit their NFT digital cartoon art depicting this scenario

The experience can be listed in the gallery and discussed in the Chat Box.

- address123: “Wow this really resonated with me. I was also picked on when I was young and this story was very impactful. I would like to purchase your experience for 2000 EGT.”

2) “My grandmother died today. I’m left feeling regretful and confused that I never spent time with her while she was alive. I never asked her to tell me stories about her life, I took no wisdom from her and I’m regretful.”

\*Cartoon Grandmother NFT

3) “I miss her so much. How can I be invisible to her? We did so much together. But she doesn’t respond anymore. I’m a ghost to her.”
